

What's new in MS Teams – Audio/Video calling optimization

AI-based noise suppression

We are excited to announce that you will have the ability to remove unwelcome background noise during your calls and meetings with our new AI-based noise suppression option.

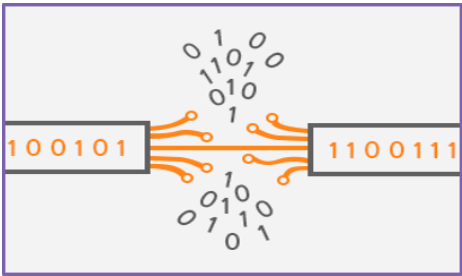

A new audio codec for great quality even in low bandwidth

With more virtual meetings, many users require great call quality even when your network is limited. Our latest innovation is a new audio codec, Satin, which offers great audio quality at a bitrate as low as 6kbps, making meetings sound natural and clear even when the network has low bandwidth.

Packet loss improvement for choppy audio

When bandwidth is poor, some of the audio information gets lost in transmission. When Teams detects an unstable network, it automatically attempts to recover some of the lost data to deliver smooth, clear audio. Teams continually monitors audio quality and adapts accordingly to keep participants engaged in the meeting.

Stay connected, no matter where you're working with a portfolio of high-quality devices

Teams provides a great integrated softphone experience on both mobile and desktop, and a robust line-up of hardware options allow you to choose the right physical endpoints for your need:

- Teams displays:** Adding an intelligent companion device like the Teams display can revolutionize the way you work. Microsoft Teams displays features an ambient touchscreen, and a hands-free experience powered by Cortana.
- Low-cost phones:** The new cost-effective IP phones devices integrate natively with the Teams phone app, and provide high-quality audio, and core calling features at an affordable price.
- Device-as-a-Service:** The new Teams Device-as-a-Service offering provides flexible monthly payments, making it easier and more affordable than ever to get your users the devices they need.

Unlock success with the Tata Communications' adoption strategy

Tata Communications' exclusive Customer Success Team can help you achieve success by helping in the development of adoption strategies and constructing communication plans, enabling you to derive maximum benefit from your availed collaboration platform. Acting as a catalyst, Tata Communications will be assisting you in unlocking your success by implementing the following:
